

Exhibit G

U.S. Court of Appeals  
Federal Circuit

In re Clement

No. 97-1202

Decided December 12, 1997

## PATENTS

1. Practice and procedure in Patent and  
Trademark Office — Reissue — Error  
without deceptive intent (§110.1303)

Attorney's failure to appreciate full scope of invention qualifies as error under 35 USC 251 and is correctable by reissue, but deliberate withdrawal or amendment does not involve inadvertence or mistake contemplated by Section 251, and recapture rule therefore prevents patentee from regaining, through reissue, subject matter surrendered in effort to obtain allowance of original claims; under this rule, reissue claims that are broader than original claims in manner directly pertinent to subject matter surrendered during prosecution are impermissible.

2. Practice and procedure in Patent and  
Trademark Office — Reissue — In general (§110.1301)

Recapture rule bars reissue claim if it is as broad as or broader than canceled or amended claim in all respects; if reissue claim is narrower in all respects, recapture rule does not apply, but other rejections are possible.

3. Practice and procedure in Patent and  
Trademark Office — Reissue — In general (§110.1301)

Recapture rule bars reissue claim that is broader than canceled or amended claim in some aspects, but narrower in others, if reissue claim is as broad or broader in aspect germane to prior art rejection, but narrower in another aspect completely unrelated to rejection; if reissue claim is narrower in aspect germane to prior art rejection, and broader in aspect unrelated to rejection, then recapture rule does not bar claim, but other rejections are possible.

4. Practice and procedure in Patent and  
Trademark Office — Reissue —  
Broader claims sought (§110.1313)

Recapture rule bars reissue claim of patent for method of producing pulp from waste paper, even though reissue claim is narrower than claim amended during prosecution in one area relevant to prior art rejection, since claim is also broader than amended claim, in that it eliminates several very specific process limitations which were added in order to

distinguish invention over prior art, and since, on balance, reissue claim is broader than it is narrower in manner directly pertinent to subject matter that patentee surrendered during prosecution.

5. Practice and procedure in Patent and  
Trademark Office — Reissue —  
Broader claims sought (§110.1313)

Recapture rule does not apply when broadening of reissue claim not only relates to aspect of issued claim that was never narrowed to overcome prior art, or argued as distinguishing claim from prior art, but also is not materially related to alleged error supporting reissue, but this rule does not require determination of whether broader aspects of reissue claims are related to alleged error.

6. Practice and procedure in Patent and  
Trademark Office — Reissue — In general (§110.1301)

Practice and procedure in Patent and  
Trademark Office — Reissue — Effect  
of grant or denial (§110.1309)

Rejection of reissue claims on ground of defective declaration is vacated, since claims, which are identical to those in issued patent, are not subject to recapture rule, and defective declaration thus would not invalidate them in and of itself, and since surrender of issued patent does not take effect until reissue patent issues, and claims therefore continue to exist with their normal presumption of validity unaffected by examiner's rejection based on allegedly defective declaration; however, claims identical to those in issued patent cannot alone support reissue application, and instant application would therefore fail to comply with 35 USC 251 even if patentee were to cure allegedly defective declaration.

Particular patents — Chemical — Waste  
paper treatment

4,780,179. Clement, method for producing pulp from printed unselected waste paper, rejection of reissue claims 49-52 affirmed; rejection of claims 1-18 vacated.

Appeal from the U.S. Patent and Trademark Office, Board of Patent Appeals and Interferences.

Application (serial no. 08/054,951) of Jean-Marie Clement for reissue of patent no. 4,780,179. From decision sustaining rejection of application claims 1-18 and 49-52, applicant appeals. Affirmed in part and vacated in part.

Lawrence M. Green and Christopher S. Schultz, of Wolf, Greenfield & Sacks, Boston, Mass., for appellant.

John M. Whealan, associate solicitor, U.S. Patent and Trademark Office, Nancy J. Linck, solicitor, Albin F. Drost, deputy solicitor, and Scott A. Chambers, associate solicitor, for appellee.

Before Mayer, circuit judge, Smith, senior circuit judge, and Clevenger, circuit judge.

Mayer, J.

Jean-Marie Clement appeals the decision of the United States Board of Patent Appeals and Interferences sustaining the rejection of claims 1-18 and 49-52 in reissue application Serial No. 08/054,951 under 35 U.S.C. § 251 (1994). Because the board correctly applied the recapture rule to bar claims 49-52 and because claims 1-18 alone cannot support the reissue application, we affirm in part and vacate in part.

#### Background

This case is about U.S. Patent No. 4,780,179 (the '179 patent) issued to Jean-Marie Clement. The '179 patent claims a method for treating waste paper that removes "stickies," such as glues and plastics, under a first set of environmental conditions, before removing inks under a second set of environmental conditions.

The '179 patent issued from application Serial No. 06/822,943 (the '943 application), which was a continuation of application Serial No. 06/482,623 (the '623 application). During prosecution, Clement amended the claims to overcome U.S. Patent No. 4,360,402, issued to Ortner et al. (Ortner), and an article written by Michael Burns entitled "Waste Paper Preparation Plant and Systems," published in the June/August 1973 issue of *Paper Technology* (Burns). The broadest of the '623 application's claims, original claim 1, recites:

A method of treating a mixture of printed and contaminated waste paper in order to produce pulps for the use in the manufacture of pulp and paper boards, which method comprises:

(a) forming an aqueous pulp of said waste material at low temperature, low specific mechanical energy, thereby forming a pulpable slurry and releasing the non-ink contaminants from the surface of

the paper but without dispersing them inside the fibrous suspension;

(b) separating the non-ink contaminants from the pulp by mechanical separation, without the use of froth floatation or solvent extraction or other process, using conventional screens and centrifugal cleaners and without any further application of strong shear forces to the pulp;

(c) softening of the ink particles vehicles and weakening of their bondings with the surface of the fibres by submitting the pulp at a consistency of more than 15% at the simultaneous actions of (A) high temperature — between 85 and 130°C. — (B) high shear forces and (C) at least one de-inking agent, under alkaline [sic] conditions;

(d) detaching the ink particles from the surface of the fibres and dispersing them into the fibrous suspension by submitting the pulp to the simultaneous actions of (A) high temperature — between 85 and 130°C. — (B) high shear forces and (C) at least one chemical dispersing agent, under alkaline [sic] conditions;

(e) removing the free ink particles, by means of the most appropriate known method and up to the degree of brightness required by the final use of the pulp.

In an effort to overcome Ortner, Clement submitted a preliminary amendment in the '943 application dated January 27, 1986, which replaced original claim 1 with claim 42. Claim 42 is limited to: (1) carrying out step (a) at room temperature; (2) using mechanical energy less than 50 KW.H/Ton in step (a); (3) removing the ink by applying a combination of high temperature between 85 and 130°C, mechanical energy greater than 50 KW.H/Ton; and a de-inking or chemical dispersing agent under alkaline conditions in steps (c) and (d), respectively; and (4) limiting the duration of steps (c) and (d) to between two and ten minutes. In this preliminary amendment, Clement argued that Ortner's process could not apply simultaneously the higher temperature and larger shear force (mechanical energy greater than 50 KW.H/Ton) recited in steps (c) and (d). Clement also argued that using a higher temperature in Ortner's process would prevent the final product from having the necessary brightness.

In response, the examiner withdrew the Ortner reference, but relied on Burns until Clement's amendments dated December 23, 1986, and June 29, 1987, and an examiner's amendment dated May 16, 1988, added the following limitations: (1) steps (a) and (b) remove substantially all the non-ink contami-

nants including the stickies; (2) steps (c) and (d) include strong alkaline conditions having a pH of at least 9; (3) the brightness of the final pulp in step (f) is at least 59 ISO; and (4) step (b) takes place at room temperature. The table at Appendix A shows claim 42 before the last two amendments. In his December 23, 1986, amendment, Clement specifically argued that Burns fails to disclose the strong alkaline conditions having a pH greater than 9 that he added to steps (c) and (d). In his June 29, 1987, amendment, he continued to traverse the examiner's assertion that Burns discloses removing the stickies at room temperature through the application of mechanical energy lower than 50 KW.H/Ton. The patent issued on October 25, 1988, with claim 42 becoming claim 1, as shown in the table at Appendix B.

On October 18, 1990, Clement filed re-issue application Serial No. 07/600,012 (the '012 application). During prosecution of the '012 application, he admitted that he added "very specific process parameters" to issued claim 1 during prosecution of the '943 application "in order to distinguish over the prior art." Clement later abandoned the '012 application in favor of continuation reissue application Serial No. 08/054,951 (the '951 application), presently on appeal. The '951 application includes claims 1-13, which correspond to claims 1-18 of the '179 patent, and claims 49-52, which are admittedly broader than the '179 patent's claims. In his reissue declaration, Clement stated that as a result of his failure to understand the claims and his attorney's failure to appreciate the scope of his invention, claims 1-18 of the '179 patent are unduly limited because "step (a) recites forming the first fibrous suspension at room temperature by applying specific mechanical energy lower than 50 KW.H/Ton." In addition, "the temperature, mechanical energy and pH conditions set forth in steps (c) and (d)" unduly limit claim 1 and claims 2-18, which depend from it. Claim 49 eliminates these limitations and the room temperature limitation in the first claim's step (b). The table at Appendix B compares reissue claim 49 with claim 1 of the '179 patent with differences italicized.

The examiner rejected claims 49-52 under 35 U.S.C. § 251<sup>1</sup> for being broadened in a reissue application filed outside the two year

statutory period. The examiner also rejected claims 1-18 and 49-52 under section 251 for lacking a basis for reissue because recapture is not an error so correctable. The examiner found the reissue declaration defective under 37 C.F.R. § 1.175 (1997) because it failed not only to mention the error in step (b), but also to explain sufficiently how any of the errors arose. The examiner determined that these defects were not curable because the recapture rule applied. Clement appealed the examiner's final rejection to the United States Board of Patent Appeals and Interferences (the board).

The board determined that Clement filed his broadening reissue application timely. It further found that during prosecution of the '179 patent, Clement added temperature, mechanical energy, and pH limitations to overcome prior art rejections. The board noted that the temperature limitation in step (a) and the temperature and mechanical energy limitations in steps (c) and (d) "were argued by [Clement] to be features not suggested by Ortner or Burns and ... were accepted by the examiner as distinguishing over these references." It concluded that Clement implicitly admitted that "broader claims not restricted to ... [these limitations] were not patentable over the prior art represented by Ortner." The board found that claims 49-52 do not include these limitations and concluded that the reissue claims seek to broaden the patent in a manner directly pertinent to subject matter that Clement deliberately surrendered to overcome prior art rejections. It therefore sustained the rejection of claims 49-52 for failing to comply with 35 U.S.C. § 251, and the rejection of claims 1-18 and 49-52 based on a defective reissue declaration. Clement appeals.

### Discussion

[1] Determining whether an applicant has met the statutory requirements of 35 U.S.C. § 251 is a question of law, which we review *de novo*. *Mentor Corp. v. Coloplast, Inc.*, 998 F.2d 992, 994, 27 USPQ2d 1521, 1524 (Fed. Cir. 1993). This legal conclusion is based on underlying findings of fact, which we sustain unless they are clearly erroneous. *In re Kemps*, 97 F.3d 1427, 1430, 40 USPQ2d 1309, 1312 (Fed. Cir. 1996); *Mentor*, 998 F.2d at 994, 27 USPQ2d at 1524. An attorney's failure to appreciate the full scope of the invention qualifies as an error under section 251 and is correctable by reissue. *In re Wilder*, 736 F.2d 1516, 1519, 222 USPQ 369, 370-71 (Fed. Cir. 1984). Never-

<sup>1</sup>Section 251 allows patentees to correct "errors" made during prosecution, such as claiming less than the patentee had a right to claim. A reissue patent may not, however, enlarge the scope of the claims unless the patentee files the reissue application within two years of the grant of the patent.

theless, "deliberate withdrawal or amendment . . . cannot be said to involve the inadvertence or mistake contemplated by 35 U.S.C. § 251." *Haliczer v. United States*, 356 F.2d 541, 545, 148 USPQ 565, 569 (Ct. Cl. 1966). The recapture rule, therefore, prevents a patentee from regaining through reissue the subject matter that he surrendered in an effort to obtain allowance of the original claims. See *Mentor*, 998 F.2d at 995, 27 USPQ2d at 1524. Under this rule, claims that are "broader than the original patent claims in a manner directly pertinent to the subject matter surrendered during prosecution" are impermissible. *Id.* at 996, 27 USPQ2d at 1525.

The first step in applying the recapture rule is to determine whether and in what "aspect" the reissue claims are broader than the patent claims. For example, a reissue claim that deletes a limitation or element from the patent claims is broader in that limitation's aspect. Clement argues that the board focused too much on the specific limitations that were omitted from the reissue claims. Although the scope of the claims is the proper inquiry, *In re Richman*, 409 F.2d 269, 274, 161 USPQ 359, 362 (CCPA 1969), claim language, including limitations, defines claim scope. *Abtox, Inc. v. Exitron Corp.*, 122 F.3d 1019, 1023, 43 USPQ2d 1545, 1548 (Fed. Cir. 1997); *Bell Communications Research, Inc. v. Vitalink Communications Corp.*, 55 F.3d 615, 619, 34 USPQ2d 1816, 1819 (Fed. Cir. 1995) ("[T]he language of the claim defines the scope of the protected invention."). Under *Mentor*, courts must determine in which aspects the reissue claim is broader, which includes broadening as a result of an omitted limitation. The board did not err by determining which limitations Clement deleted from the patent claims.

The second step is to determine whether the broader aspects of the reissue claims relate to surrendered subject matter. To determine whether an applicant surrendered particular subject matter, we look to the prosecution history for arguments and changes to the claims made in an effort to overcome a prior art rejection. See *Mentor*, 998 F.2d at 995-96, 27 USPQ2d at 1524-25; *Ball Corp. v. United States*, 729 F.2d 1429, 1436, 221 USPQ 289, 294-95 (Fed. Cir. 1984).

Although the recapture rule does not apply in the absence of evidence that the applicant's amendment was "an admission that the scope of that claim was not in fact patentable," *Seattle Box Co. v. Industrial Crating & Packing, Inc.*, 731 F.2d 818, 826,

221 USPQ 568, 574 (Fed. Cir. 1984), "the court may draw inferences from changes in claim scope when other reliable evidence of the patentee's intent is not available," *Ball*, 729 F.2d at 1436, 221 USPQ at 294. Deliberately canceling or amending a claim in an effort to overcome a reference strongly suggests that the applicant admits that the scope of the claim before the cancellation or amendment is unpatentable, but it is not dispositive because other evidence in the prosecution history may indicate the contrary.<sup>2</sup> See *Mentor*, 998 F.2d at 995-96, 27 USPQ2d at 1524-25; *Ball*, 729 F.2d at 1438, 221 USPQ at 296; *Seattle Box Co.*, 731 F.2d at 826, 221 USPQ at 574 (declining to apply the recapture rule in the absence of evidence that the applicant's "amendment . . . was in any sense an admission that the scope of [the] claim was not patentable"); *Haliczer*, 356 F.2d at 545, 148 USPQ at 569 (acquiescence in the rejection and acceptance of a patent whose claims include the limitation added by the applicant to distinguish the claims from the prior art shows intentional withdrawal of subject matter); *In re Willingham*, 282 F.2d 353, 354, 357, 127 USPQ 211, 213, 215 (CCPA 1960) (no intent to surrender where the applicant canceled and replaced a claim without an intervening action by the examiner). Amending a claim "by the inclusion of an additional limitation [has] exactly the same effect as if the claim as originally presented had been canceled and replaced by a new claim including that limitation." *In re Byers*, 230 F.2d 451, 455, 109 USPQ 53, 55 (CCPA 1956).

Once we determine that an applicant has surrendered the subject matter of the canceled or amended claim, we then determine whether the surrendered subject matter has crept into the reissue claim. Comparing the reissue claim with the canceled claim is one way to do this. *In re Wadlinger*, 496 F.2d 1200, 1204, 181 USPQ 826, 830 (CCPA 1974); *Richman*, 409 F.2d at 274, 161 USPQ at 362. If the scope of the reissue claim is the same as or broader than that of the canceled claim, then the patentee is clearly attempting to recapture surrendered subject matter and the reissue claim is,

<sup>2</sup> For example, if an applicant amends a broad claim in an effort to distinguish a reference and obtain allowance, but promptly files a continuation application to continue to traverse the prior art rejections, circumstances would suggest that the applicant did not admit that broader claims were not patentable — assuming that the applicant does not ultimately abandon the continuation application because the examiner refuses to withdraw the rejections.

Similarly, in  
"a plurality of

d. Cir. 1984), "the evidence from changes in reliable evidence of prior art is not available," *Ball*, 729 F.2d at 294. Deliberately canceling a claim in an effort to overcome prior art strongly suggests that the scope of the claim is broader than the cancellation or amendment, but it is not evidence in the record to indicate the contours of the claim. *Id.* at 995-96, 27 USPQ2d at 1438, 1439; *729 F.2d at 1438*, 27 USPQ2d at 1438; *Box Co.*, 731 F.2d at 1438 (declining to apply the recapture rule in the absence of evidence of intent to broaden the claim); *Haliczer*, 729 F.2d at 569 (acquiescence and acceptance of a claim limitation is not evidence to distinguish the claim from prior art (matter); *In re Wilcox*, 554 F.2d at 357, 127 USPQ2d at 960 (no intent to broaden canceled and amended claim); an intervening amendment adding a claim limitation has the effect as if the claim had been canceled and amended including that limitation. 230 F.2d 451, 455, 119 USPQ2d 1956).

When an applicant has amended a claim, the matter of the cancellation of the claim is then determined by comparing the amended claim with the original claim. *Adlinger*, 496 F.2d at 826, 830 (CCPA). The reissue claim is broader than that of the original claim if the patentee is recapturing surrendered subject matter. The reissue claim is,

significant amends a broad claim to distinguish a reference and to traverse the prior art. It would suggest that the broader claims are being abandoned the continu-

therefore, unallowable. *Ball*, 729 F.2d at 1436, 221 USPQ at 295 ("The recapture rule bars the patentee from acquiring, through reissue, claims that are the same or of broader scope than those claims that were canceled from the original application.") (emphasis omitted); *Byers*, 230 F.2d at 456, 109 USPQ at 56. In contrast, a reissue claim narrower in scope escapes the recapture rule entirely. *Ball*, 729 F.2d at 1436, 221 USPQ at 295.

Some reissue claims, however, are broader than the canceled claim in some aspects, but narrower in others. In *Mentor*, for example, the issued claim, which was directed to a condom catheter, recited an adhesive means that was transferred from an outer to an inner surface without turning the condom inside-out. 998 F.2d at 993, 27 USPQ2d at 1523. The issued claim also recited, *inter alia*, that the condom catheter included a "thin cylindrical sheath member of resilient material rolled outwardly upon itself to form consecutively larger rolls . . . ." One canceled claim recited an adhesive means between the rolls, but did not specify that the adhesive was transferred from the outer to the inner surface without turning the condom inside-out. Another canceled claim recited that adhesive was transferred from the outer to the inner surface, but did not specify that this operation was done without turning the condom inside-out. The prior art rejections focused on the obviousness of the adhesive means positioned between the rolls and the process of transferring adhesive to the inner surface of the condom.

In making amendments to the claim, the applicant argued that "none of the references relied upon actually showed the transfer of adhesive from the outer surface to the inner surface as the sheath is rolled up and then unrolled." *Id.* at 995-96, 27 USPQ2d at 1524-25 (emphasis in original). The reissue claim eliminated the limitation that adhesive was transferred from the outer to the inner layer, and was, therefore, broader in this aspect. The reissue claim was also narrower than the canceled claim because it recited that the catheter included "a thin, flexible cylindrical member of resilient material rolled outwardly upon itself to form a single roll. . . ." (Emphasis added). We held that, although the "flexible" and "single roll" limitations made the reissue claim narrower than both the canceled and issued claims, it did not escape the recapture rule because these limitations did not "materially narrow the claim[.]" *Id.* at 996-97, 27 USPQ2d at 1525-26.

Similarly, in *Ball*, the issued claim recited "a plurality of feedlines" and a "substantial-

ly cylindrical conductor." 729 F.2d at 1432-33, 221 USPQ at 291-92. The canceled claim recited "feed means includ[ing] at least one conductive lead," and a "substantially cylindrical conductor." The prosecution history showed that the patentee added the "plurality of feedlines" limitation in an effort to overcome prior art, but the cylindrical configuration limitation was neither added in an effort to overcome a prior art rejection, nor argued to distinguish the claims from a reference. *Id.* The reissue claim included limitations not present in the canceled claims that related to the feed means element, but allowed for multiple feedlines. On balance, the claim was narrower than the canceled claim with respect to the feed means aspect. The reissue claim also deleted the cylindrical configuration limitation, which made the claim broader with respect to the configuration of the conductor. *Id.* at 1437, 221 USPQ at 295. We allowed the reissue claim because the patentee was not attempting to recapture surrendered subject matter. *Id.* at 1438, 221 USPQ at 296.

[2,3] In both *Mentor* and *Ball*, the relevance of the prior art rejection to the aspects narrowed in the reissue claim was an important factor in our analysis. From the results and reasoning of those cases, the following principles flow: (1) if the reissue claim is as broad as or broader than the canceled or amended claim in all aspects, the recapture rule bars the claim; (2) if it is narrower in all aspects, the recapture rule does not apply, but other rejections are possible; (3) if the reissue claim is broader in some aspects, but narrower in others, then: (a) if the reissue claim is as broad as or broader in an aspect germane to a prior art rejection, but narrower in another aspect completely unrelated to the rejection, the recapture rule bars the claim; (b) if the reissue claim is narrower in an aspect germane to prior art rejection, and broader in an aspect unrelated to the rejection, the recapture rule does not bar the claim, but other rejections are possible. *Mentor* is an example of (3)(a); *Ball* is an example of (3)(b).

[4] In our case, reissue claim 49 is both broader and narrower in areas relevant to the prior art rejections. Comparing reissue claim 49 with claim 42 before the May 1988 and June 1987 amendments (see the tables at Appendices A and B), we see that claim 49 is narrower in one area, namely, the brightness is "at least 59 ISO in the final pulp." This narrowing relates to a prior art rejection because, during the prosecution of the '179 patent, Clement added this brightness limitation in an effort to overcome Burns. Our comparison also reveals that reissue claim 49

is broader in that it eliminates the room temperature and specific energy limitations of step (a), and the temperature, specific energy, and pH values of steps (c) and (d). This broadening directly relates to several prior art rejections because, in an effort to overcome Ortner, Clement added to step (a) the limitation that it is carried out "at room temperature," and applies "specific mechanical energy lower than 50 KW.H/Ton to form a pumpable slurry. . . ." He argued, moreover, that the latter limitation overcame Burns despite the examiner's contention to the contrary. Clement also added to steps (c) and (d) the temperature and specific energy values in an effort to overcome Ortner, and the "strong" alkaline conditions "having a pH of at least 9" limitation in an effort to overcome Burns. Clement admitted, furthermore, that he added these "very specific process parameters . . . in order to distinguish over the prior art." Claim 49 omits each of these limitations.

On balance, reissue claim 49 is broader than it is narrower in a manner directly pertinent to the subject matter that Clement surrendered throughout the prosecution. Even with the additional limitations, claims 50-52 are also broader than they are narrower in a manner directly pertinent to the subject matter that Clement surrendered during prosecution.

[5] We do not address whether the reissue claims in this case are broader than the canceled claims in a manner directly related to the alleged error supporting reissue because we see no dispositive significance in this inquiry. In *Ball*, we said that the recapture rule does not apply when the reissue claim is broader than the canceled claim in a manner unrelated to the alleged error supporting reissue, but did not address whether the recapture rule would apply if the broadening did relate to the alleged error. 729 F.2d at 1438, 221 USPQ at 296. We can envision a scenario in which the patentee intentionally fails to enumerate an error so that he may eliminate a limitation that he argued distinguished the claim from a reference or added in an effort to overcome a reference and claim protection under *Ball*. We, therefore, think *Ball* is limited to its facts: the recapture rule does not apply when the broadening not only relates to an aspect of the claim that was never narrowed to overcome prior art, or argued as distinguishing the claim from the prior art, but also is not materially related to the alleged error. Accordingly, *Ball* does not require us to determine whether the broader aspects of the reissue claims are related to the alleged error supporting reissue.

Clement argues that, although claim 49 is broader than the issued claims, it is materially narrower than original claim 1; therefore, the recapture rule should not apply. He relies on the unsupported assumption that, for purposes of the recapture rule, we should compare the scope of the reissue claims with that of only original claim 1 to determine whether or not the reissue claim is broader in a material way. Clement has chosen original claim 1 as the basis for comparison because, in his view, it does not include limitations enumerated by the board as missing from the reissue claims. These limitations are the room temperature limitation in step (a) and the specific values of the specific energy limitations in steps (c) and (d).

Clement's assumption ignores the board's finding that the reissue claims delete the value of the high temperature and pH limitations in steps (c) and (d) and the room temperature limitation of step (b). It also ignores much of the prosecution history. The prosecution history shows that Clement abandoned the subject matter of claim 42, as it existed before the examiner's amendment dated May 16, 1988, because he allowed the examiner to amend it to obtain allowance and no other evidence suggests that Clement did not intend to abandon it. He also abandoned the subject matter of claim 42, as it existed before his June 29, 1987, amendment, as it existed before his December 23, 1986, amendment, and as it existed in his preliminary amendment. Based on his actions and statements in the prosecution history of the '179 patent and his admission in the history of the '012 application, every time Clement amended his claims, he intentionally omitted or abandoned the claimed subject matter. Furthermore, his argument that we should compare reissue claim 49 with original claim 1 is reminiscent of the patentee's unsuccessful argument in *Byers*. There, the patentee argued that the reissue claims were "intermediate in scope between certain broad claims which were canceled from [the patentee's] original application and the limited claim allowed in the patent." 230 F.2d at 457, 109 USPQ at 57. In response, the court noted that the "rejection is not based on the cancellation of the broader claims referred to in [the patentee's] brief. . . . The fact that there were other claims whose cancellation did not constitute such a bar is immaterial." *Id.*

We agree with the board's conclusion that the reissue claims are broader than the patent claims in a manner directly pertinent to the subject matter that Clement surrendered during prosecution. Therefore, it correctly applied the recapture rule, and we affirm the

claim 49 is material; therefore, it is not. He relies on the fact that, for purposes of claim 49, the prior art should compare with that of the prior art. He argues whether the prior art is broader in a claim than the original claim because of the limitations of the prior art. The prior art is the step (a) and the step (b) of the prior art.

the board's decision to delete the pH limitation of the room (b). It also has a history. The prior art at Clement's claim 42, as amended, allowed the prior art in allowance of the prior art that Clement also abandoned claim 42, as it was amended in December 23, 1987. It existed in his mind on his acceptance of his admission in the prior art, every time the prior art was intentional. The prior art subject matter that we claim with original patentee's claims. There, the prior art claims were given certain limitations from the prior art and the prior art patent." 230 In response, the prior art is not the prior art of the broader patentee's] brief. The prior art claims constitute such a

conclusion that the prior art is more pertinent to the prior art surrendered. It correctly we affirm the

board's decision to sustain the examiner's rejection of claims 49-52.

[6] Because we affirm the board's decision on recapture, Clement cannot cure the allegedly defective declaration with respect to claims 49-52. As a result, we do not reach that issue. Because claims 1-18 are not subject to the recapture rule, however, a defective declaration would not, in and of itself, invalidate them. The Commissioner concedes this point and reminds that, because under 35 U.S.C. § 252 (1994) the surrender of the '179 patent does not take effect until the reissue patent issues, "original claims 1-18 continue to exist with their normal presumption of validity," unaffected by the examiner's rejection based on the allegedly defective declaration. We, therefore, vacate the board's decision to the extent that it rejects claims 1-18 because of the allegedly defective declaration.

Claims 1-18 alone cannot support a reissue application. See *In re Keil*, 808 F.2d 830, 830, 1 USPQ2d 1427, 1428 (Fed. Cir. 1987)

(Section 251 requires a change in "either the patent specification or claims."); *In re Dien*, 680 F.2d 151, 152 n.4, 214 USPQ 10, 12 n.4 (CCPA 1982) ("[I]t goes without saying that reissue of a patent in identical form with the original patent is not a possibility."). The '951 application would fail, therefore, to comply with section 251 even if Clement were to cure the allegedly defective declaration.

### Conclusion

Accordingly, the decision of the Board of Patent Appeals and Interferences sustaining the rejection of claims 49-52, and to reject the reissue application is affirmed, and its decision to reject original claims 1-18 is vacated.

### COSTS

Each party shall bear its own costs.
